Functional repertoires across viral lifestyles

Virulent (n = 6,061) Temperate (n = 3,076)

Function	vOTUs carrying the function (%)	Odds ratio (95% CI)	BH q
		Temperate−associated / Virulent−associated	
AMG			
Anaerobic RNR activation (NrdG)			<0.001
Folate−mediated one−carbon metabolism			0.001
S−adenosylmethionine synthesis			<0.001
Cobalamin biosynthesis−related			<0.001
Sulfur mobilization / Fe−S assembly			<0.001
PhoH−family functions			0.188
Folate biosynthesis			<0.001
NAD biosynthesis / salvage			0.434
Amino−acid transamination			<0.001
Nucleobase transport			0.933
Shikimate−pathway reactions			<0.001
Iron storage		Inf	<0.001
APG			
Toxin−antitoxin−associated candidates			<0.001
Other anti−defense functions			0.005
Anti−restriction			0.030
CRISPR−Cas−associated functions			<0.001
Sporulation−associated functions			0.264
Anti−CRISPR			<0.001
Secretion−associated functions			<0.001
Abi−associated defense candidates			<0.001
Stress−response functions			1.000
AReG			
Transcription regulation (unspecified)			<0.001
Anti−repression			<0.001
Transcriptional repression			<0.001
RNA−binding−associated functions			<0.001
Transcription initiation / sigma factors			<0.001
Transcriptional activation			<0.001
SOS−associated regulation			<0.001
Cell−division regulation			<0.001
Biofilm / matrix regulation			1.000
Competence−associated regulation			<0.001
Transcription antitermination			0.020
